

GRACO UNIVERSAL FITTING FIXTURE

This fixture is the same as the fixtures we have used in our custom shop for years, to fit buttplate hardware and recoil pads.

Our fixture is used on band saws, belt sanders, and disc sanders, and is an easy fixture to set the "toe angle" and "heel angle" to match the gunstock. The combination of screw holes in the mounting plate allows all types of hardware and recoil pads to be attached.

The unique design allows removal of excess material from the buttplate hardware or recoil pads by band sawing instead of grinding it away; thus removing heat and dust problems, and keeping disc or belt sanding to a minimum.

Setting Toe Angle

**Pad ready to grind
Toe Angle and Sides.**

**Re-set fixture for
Heel Angle.**
